## VINGT-8 ISOGONE

TECHNICAL

Here is a watch that challenges our idea of how time

is displayed. What was once a familiar reflex now demands reflection. The

principle behind the Vingt-8 Isogone is simple yet complex. On each hour, the

hour and minute hands overlap; on each half-hour, they are opposite each other.

The minute circle turns at the same rate as the hour hand to show the time. The

angle between the hands is always the same, regardless of the time. Their

position in relation to each other is always according to the minutes, again whatever time it is. If you wear a watch out of pure necessity, the Vingt-8 Isogone is not for you. For you other dreamers, as well as inviting a more considered relationship with time, it is also a chance to appreciate the subtle beauty of the hand-guilloché dial in silver.
